#### **MEDIA CONTACTS:**

Dr. Victoria L. Smith, Ph.D.  
Deputy State Entomologist  
The Connecticut Agricultural Experiment Station  
123 Huntington Street (zip 06511)  
P.O. Box 1106  
New Haven, CT 06504  
Phone: (203) 974-8474

Dr. Kirby C. Stafford III, Ph.D.  
Chief Scientist/State Entomologist  
The Connecticut Agricultural Experiment Station  
123 Huntington Street (zip 06511)  
P.O. Box 1106  
New Haven, CT 06504  
Phone: (203) 974-8485

### **CAES Announces the Finding of Spotted Lanternfly in West Haven and Greenwich, Connecticut**

**New Haven, CT** - The Connecticut Agricultural Experiment Station (CAES) in cooperation with USDA APHIS Plant Protection and Quarantine (PPQ) announce the detection of single live adult spotted lanternfly, *Lycorma delicatula*, in West Haven, CT and multiple live adults in Greenwich, CT. While the spotted lanternfly in West Haven may be a single import due to travel from out of state, there is a population in Greenwich and surveys in the immediate areas of both detections will be conducted. Single adults were detected in Farmington in 2018 and Southbury in 2019.

The spotted lanternfly is an invasive sap-feeding planthopper that was discovered in Berks County, Pennsylvania in 2014. It is native to China, India, and Vietnam. It attacks many hosts and has the potential to severely impact Connecticut's farm crops, particularly apples, grapes, and hops, as well as a number of tree species like maple. In the fall, adults can often be found congregating on tree-of-heaven (*Ailanthus*), willows and other trees. They will lay egg masses on trees and almost any nearby surface. It has also been reported in New Jersey, Delaware, Virginia and New York. Early detection is important for the protection of Connecticut businesses and agriculture. The public is urged to report potential sightings of this invasive pest to [ReportSLF@ct.gov](mailto:ReportSLF@ct.gov). Submission of a photograph with any report is encouraged.
