INTRODUCTION

The present catalogue of the Family Meenoplidae forms Part 6 of Fascicle IV of the General Catalogue of the Hemiptera of the World, which is devoted to the Superfamily Fulgoroidea.

CHARACTERS OF THE FAMILY

This is another small family of fulgorids, containing 9 genera and 53 species. This family has affinities with the Cixiidae and was formerly included as a subfamily of that family. However, there are a number of characters which distinguish it at once from the Cixiidae, and for the present, at least, this family should be kept separate. All the species are moderately small insects, with the body strongly compressed and the tegmina tectiform. The head is usually small, with the vertex and frons usually broad and the lateral carinae strongly elevated. The antennae are generally short and simple. The last segment of the labium is elongate. The median ocellus is generally present. The thorax is usually large, with the carinae indistinct or wanting. The tegulae are large, the pronotum is short, broader than the head, and the mesonotum is broader than the pronotum. The tegmina are always macropterous and normally are held vertically in repose. The venation is in general cixiid-like, with the basal costal area more or less expanded. Subcosta and radius are typically united for more than half their lengths. Radius and media are usually simple, but cubitus is complex, generally with supernumerary veins. One or both claval veins are typically granulate. The abdomen is compressed, with the sixth, seventh and eighth tergites bearing wax-secreting pores. The male genitalia superficially resemble the genitalia in many derbids, with the genital plates large and complex. The female genitalia are incomplete, the ovipositor being absent or greatly reduced.

CLASSIFICATION ADOPTED

The family is divided into two subfamilies as proposed by Muir in 1930.

Family MEENOPLIDAE

Subfamily NISIINAE

Subfamily MEENOPLINAE

HISTORICAL RÉSUMÉ

This family was established by Fieber in 1866 to include a single species from Greece. Since that time the list of genera and species has been increased by the work of Kirkaldy and Muir principally in the Pacific area; by Distant, Muir, and Jacobi in the Ethiopian Region; by Distant and Melichar

in India; by Kirkaldy in Australia; and by Matsumura in Formosa and Japan. In so far as is now known the species are confined to the Eastern Hemisphere.

GENERIC AND SPECIFIC SYNONYMY

Genus **BASILEOCEPHALUS** Kirkaldy

Basileocephalus Kirkaldy. See *Basileocephalus* Kirkaldy.
Family DERBIDAE. Fascicle IV, Part 4.

Genus **INXWALA** Distant

Inxwala Distant. See *Anigrus* Stål.

bergrothi Muir. See *Anigrus bergrothi* Muir.

modesta Distant. See *Anigrus sordidus* Stål.

muiri Bergroth. See *Anigrus muiri* Bergroth.

Genus **MENEOPPLUS**

Meneoplus. Typographical error for *Meenoplus* Fieber.

Genus **NISI**

Nisi. Typographical error for *Nisia* Melichar.

Genus **NISSIA**

Nissia. Typographical error for *Nisia* Melichar.

Genus **NYSIA**

Nysia. Typographical error for *Nisia* Melichar.

Genus **PARANIGRUS** Bergrøth

Paranigrus Bergrøth. See *Anigrus* Stål.

fletcheri Kirkaldy. See *Phaconeura fletcheri* Kirkaldy.

muiri Bergrøth. See *Anigrus muiri* Bergrøth.

Genus **PARANISIA** Matsumura

Paranisia Matsumura. See *Anigrus* Stål.

formosana Matsumura. See *Anigrus formosanus* Matsumura.

frequens Matsumura. See *Anigrus frequens* Matsumura.

nigricans Matsumura. See *Anigrus nigricans* Matsumura.

Genus **PHACIOCEPHALUS** Kirkaldy

Phaciocephalus Kirkaldy. See *Phaciocephalus* Kirkaldy.
Family DERBIDAE. Fascicle IV, Part 4.

Genus **PHACONURA**

Phaconura. Typographical error for *Phaconeura* Kirkaldy.

Genus **THYROCEPHALUS** Kirkaldy

Thyrocephalus Kirkaldy. See *Lamenia* Stål.
Family DERBIDAE. Fascicle IV, Part 4.
