**Abstract** Two new record species of Delphacidae in Chinese fauna, *Stenocranus pacificus* Kirkaldy 1907 and *Ribautodelphax pusilla* Emeljanov 1972 are reported in this paper. Photos of male habitus of the two species are provided and male genitalia are reillustrated.

**Key words** Hemiptera, Delphacidae, new record, China

### *S tenocranus pacificus* Kirkaldy, 1907 New record to China

(Figs 1–4, 9–17)

*S tenocranus pacificus* Kirkaldy, 1907: 139

*S tenocranus pacificus* Fenmeh 1978: 219. Misidentified

Macropterous male 4.40–4.42 mm, tegmina length 3.63–3.83 mm, width at tegulae 0.89–0.98 mm.

Ground color of male body orange-brownish, with a whitish median longitudinal stripe from vertex anteriorly to hind margin of scutellum, along the stripe bordered with orange yellow. Vertex with sublateral blackish stripes extending nearly to end of frons. Eyes dark. Ocelli blackish red. Tegmina with a longitudinal brownish band along inner margin. Abdomen orange brown. Dorsum of male abdomen furnished with irregular sordid patches laterally on each segment. Mid-dorsum of segments IV–VII blackish brown on anterior tergal margins. Male pygofer sordid. Tips of produced processes of male anal segment black.

Head Including eyes narrower than pronotum (about 0.86: 1.00) (Figs 1, 4). Vertex longer medially than wide at base (about 1.26: 1.00), anteriorly transverse, slightly produced medially, lateral carinae subparallel except where expanded behind eyes, basal compartment wider at base than greatest length (Figs 1, 4). Frons more than twice as long as the maximum width, widest at apex, frontoclypeal suture convex, lateral carinae sinuate (Fig. 3). Postclypeus same width as frons at apex, post and anteclypeus together approximately 0.94× length of frons, median carina well defined (Fig. 3). Antennal segments cylindrical surpassing frontoclypeal suture, segment II about 2.2 times as long as I (Fig. 3). Rostrum almost reaching to metacoxae.

Thorax Pronotum in midline slightly shorter than vertex, lateral carinae slightly curved diverging towards and nearly reaching posterior margin (Figs 1, 4). Mesonotum longer than vertex and pronotum combined (about 1.2: 1.0), lateral carinae slightly diverging and extending to posterior margin, median carina obscure apically (Figs 1, 4). Tegmina long surpassing tip of abdomen about half of its total length, rounded

at apex (Figs 2, 9). Metathoracic legs 1.3–1.4 times longer than metatarsi together bearing 2 lateral and 5 apical teeth (grouped 2+3), spinulation of metatarsus 7 (2+5), 2nd 4. Posttibial spur slightly shorter than metatarsus, foliate with 27–29 small black-tipped teeth on lateral margin.

Male genitalia Pygofer in profile ventrally distinctly longer than dorsally, laterodorsal angles obtusely rounded, not produced caudad (Fig. 11). Diaphragm of pygofer with dorsal margin slightly incised medially (Fig. 12). Parameres broad contiguous at base, diverging thence from caudal view, widest near apex, inner margin shallowly concave at middle, apex strongly narrowed with outer angle produced, which is bifurcated in lateral aspect (Figs 10, 11, 13–17). Aedeagus elongate, broad in its basal quarter, distally curved ventrad with a long spinose process arising at subapex on the dorsal side, ventrally near apex about 3 saw-like teeth (Figs 13–15). Opening of diaphragm for parameres trapezoidal shape, dorsal margin produced downward medially, ventral margin sinuate (Fig. 12). Suspensorium n-shaped, short and broad laterally with long arms which is deeply incised embracing the base of aedeagus but opening ventrally (Figs 13–16). Anal segment ring-like ventrodistally closed by broad chitinous bridge, a stout and short process produced from each laterodistal angle, widely separated at base (Fig. 10).

Specimens examined 2♂♂ (macropterous), Wuyanling, Zhejiang Province, China, 5 Aug 2007, coll QIAO Lu-Man; 1♂ (macroporous), Fengyang Mountain, Zhejiang Province, China, 31 July 2007, coll QIAO Lu-Man.

Distribution China (Zhejiang Province); Fiji, Western Caroline Islands, Palau, Philippines.

### *Ribautodelphax pusilla* Emeljanov, 1972 New record to China (Figs 5–8, 18–30)

*Ribautodelphax pusilla* Emeljanov, 1972: 220. Anufriev & Emeljanov 1988: 415; Wilson, 1992: 88.

*Ribautodelphax balgasiensis* Vilibaste, 1980: 14.

Macropterus male 3.23–3.31 mm, tegmina length 2.67–2.78 mm, width at tegulae 0.85–0.93 mm; brachypterous male

This project was supported by the National Science Foundation of China (30970387) and by Northwest A & F University Grant for Young Academic Talent (01140301).

Figs 1–4 *Stenoranus pacificus* Kirkaldy 1907 5–8. *Ribautodelphax pusilla* Emeljanov 1972 1, 5. Male habitus (macropterous), dorsal view. 2, 6 Same, left lateral view. 3, 8. Head, ventral view. 4. Head and thorax, dorsal view. 7. Male habitus (brachypterous), dorsal view.

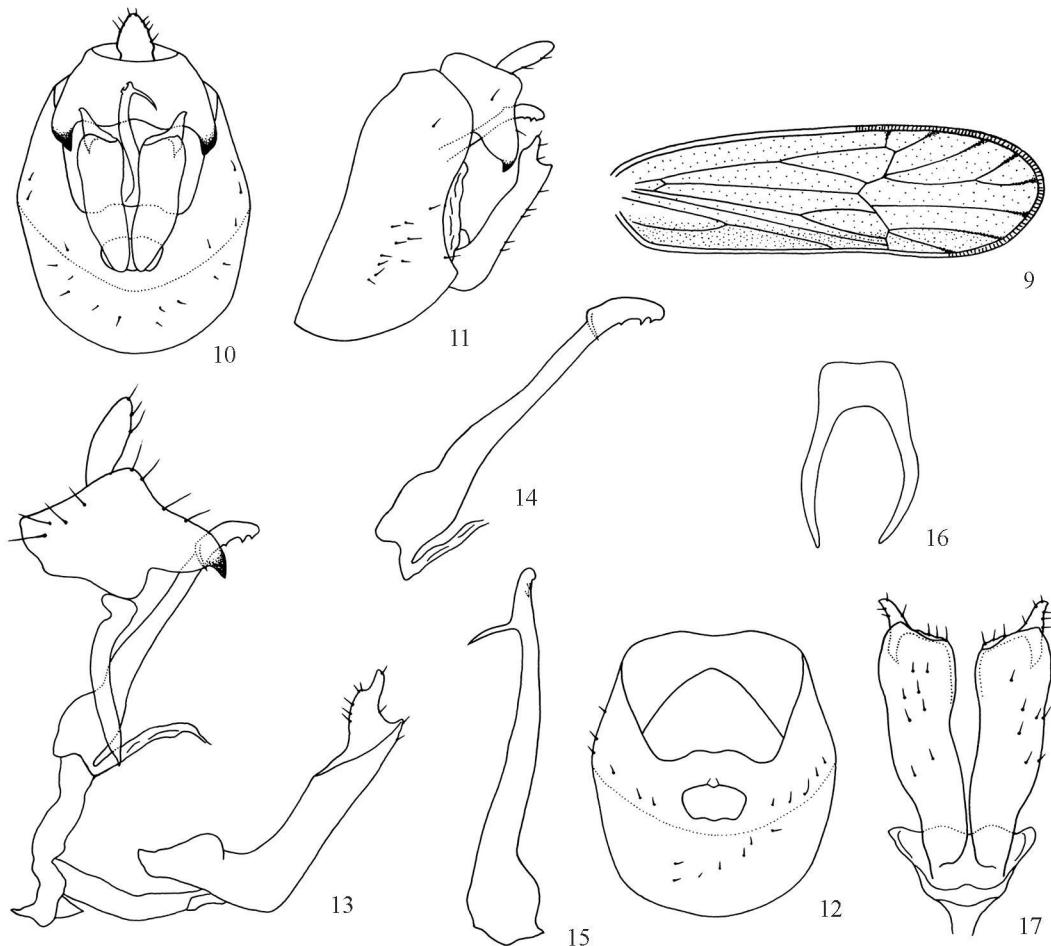

length 2.43–2.53 mm, tegmina length 1.26–1.34 mm, width at tegulae 0.82–0.87 mm.

**Color** Macropertorous Male vertex beige in basal half basal compartment with a brown marking at each side, vertex in apical half black, frons and genae tan, frons with longitudinal black stripes adjacent lateral carinae and at the both sides of median carina, postclypeus mostly black. Antennae sordid yellow. Eyes black. Ocelli blackish brown. Pronotum beige to yellowish brown, at each side of median carina with a brown marking medially outer lateral carinae of pronotum blackish or not. Mesonotum brown. Tegulae sordid. Abdomen and male pygofer black, dorsum and venter of male abdomen with sordid orange patches laterally at each tergite. Tegmina brownish yellow, subhyaline. Legs sordid brown, 1st to 3rd femora and tibiae with blackish longitudinal stripes. Brachypterous male body color as macropertorous.

**Head** Including eyes slightly narrower than pronotum

(about 0.92: 1.00) (Figs 5, 7). Vertex quadratę wider at base than medially long about 1.1: 1.0, at apex slightly narrower than at base (about 0.9: 1.0), anterior margin transverse slightly produced in middle, two lateral carinae subparallel except where expanded laterally behind eyes, submedian carinae originating from near base of lateral carinae percurrent and uniting at apex of vertex, Y-shaped carina with arms and stalk distinct area of basal compartments slightly concave (Figs 5, 7). Frons about twice as long as its maximum width, widest near lower parts of eyes, lateral frontal margins slightly convex, median carina protuberant (Fig. 8). Antennal segments cylindrical surpassing frontoclypeal suture, segment I slightly longer than wide at apex, segment II about 2 times as long as I (Fig. 8). Postclypeus wider at base than frons at apex, post and anteclypeus together approximately 0.7× length of frons (Fig. 8). Rostrum surpassing mesothorax.

**Thorax** Pronotum in midline slightly shorter than length of

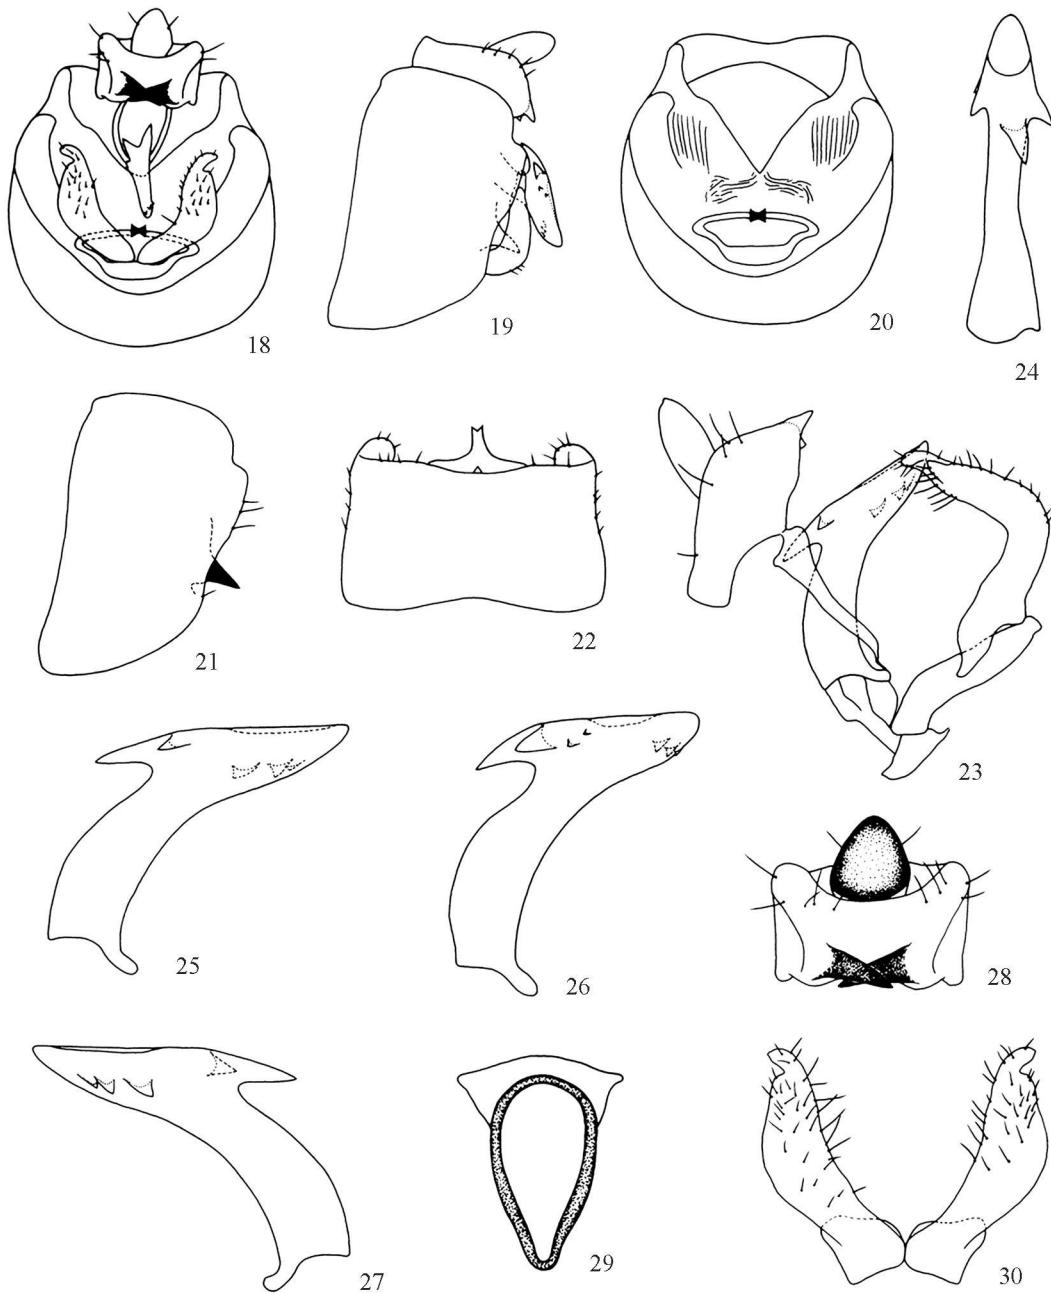

Figs 9–17. *Stenocranus pacificus* Kırkakly, 1907. 9. Left forewing. 10. Male genitalia caudal view. 11. Sam., left lateral view. 12. Male pygofer caudal view, anal segment aedeagus and parameres removed. 13. Anal segment aedeagal complex and parameres left lateral view. 14. Aedeagus left lateral view. 15. Same, dorsal view. 16. Suspensorium, caudal view. 17. Parameres caudal view.

vertex about 0.8: 1.0 posterior margin concave inwardly, lateral carinae slightly sinuate, diverging postero-laterally but not attaining posterior margin (Figs 5, 7), Mesonotum in macropters slightly longer in midline than vertex and pronotum together (about 1.2: 1.0) (Fig. 5), in brachypters shorter than vertex and pronotum combined (about 0.9: 1.0) (Fig. 7), lateral carinae straight attaining or reaching near posterior margin median carina obscure apically, in brachypters the lateral carinae of mesonotum more visible (Figs 5, 7). Tegmina in macropters long surpassing tip of abdomen about one third of its total length acutely rounded at apex (Fig. 6), in brachypters short apically rounded and attaining the fifth abdominal tergite (Fig. 7). Legs with metatarsus bearing 2 lateral and 5 apical teeth (grouped 2+3), metatarsi distally with 7 apical teeth (grouped 2+5), tarsomere II with 4 apical teeth. Post-tibial spur bilobate tectiform, with about 15 denticles along interior margin.

Male genitalia Male pygofer subquadangular in lateral view, heterodorsal angle obtusely rounded not produced caudad, hetero-caudal margin strongly produced caudad in a lobe near dorsal aspect which is gradually narrowing ventrad (Figs 19, 21), in caudal aspect pygofer ovate, heteroventral margin

incised on each side, posterior opening wider than long (Figs 18, 20). Diaphragm broad, dorsal margin incised medially, "V" shaped near ventral margin produced in a spinose process directed caudoventrad, in lateral view far surpassed posterior margin of male pygofer in ventral aspect with apex bifurcated (Figs 20–22). Suspensorium broad dorsally, ventrally ring like embracing base of aedeagus and connecting on venral side (Figs 23–29). Parameres well developed, contiguous at base and widely divergent from caudal view, widest in middle, abruptly narrowed apically (Figs 18, 30). Aedeagus tubular in lateral view curved dorso-medially with a large spinous process basal of which with another relatively small one at left side, in apical third near dorsal side with or without teeth on left side, subapex with 3 teeth on right side near ventral margin (Figs 23–27). Opening for parameres large, lateral margins sinuate, ventral margin nearly straight (Fig. 20). Male anal segment ring like, heteroventral processes spinous, oppositely crossed in caudal view (Figs 18–28).

Specimens examined 2 ♂♂ (macropterus), 9 ♂♂ (brachypterus), Mt Xiaowutai, Zhuolu County, Hebei Province, China, 24 June 2009, 2450 m, coll. QN Dao Zheng; 1 ♂ (brachypterus), Mt Xiaowutai, Zhuolu

Figs 18–30 *Rhabdophax pusilla* Emeljanov, 1972. 18 Male genitalia, caudal view. 19 Sam ♂, left lateral view. 20 Male pygofer, caudal view, anal segment, aedeagus and parameres removed. 21. Sam ♂, left lateral view. 22 Sam ♂, ventral view. 23. Anal segment, aedeagal complex and parameres, left lateral view. 24. Aedeagus, dorsal view. 25–26. Sam ♂, left lateral view. 27. Sam ♂, right lateral view. 28. Male anal segment, caudal view. 29. Suspensorium, caudal view. 30. Parameres, caudal view.
