Synonymic and distributional list of the pterygot insects of Macedonia

(Results of the Entomofauna of the World based upon info-system of the Cesa)

Ahmet Ömer Koçak Muhabbet Kemal

Abstract: Synonymic and distributional list of the pterygot insects of Macedonia (*Results of the Entomofauna of the World, based upon info-system of the Cesa*) – 73. *Priamus* (suppl.) 18: 2601-2621.

In this study, totally 471 species are listed. Synonymous names are arranged chronologically. Range of each species is given as codes. Together with the information on Lepidoptera of Macedonia recorded in info-sytem of the Cesa, total pterygot species of Macedonia increase to 1073.

Key words: List, distribution, *pterygota*, *Insecta*, Macedonia.

Brief explanatory information:

Previously published article	no
Previously published report	no
Expedition made by the Cesa	yes ¹³²
Planned expeditions	no
Further planned publications	yes

In this study, totally 471 pterygot species are listed alphabetically. To each species, synonymous scientific names which are arranged chronologically, are attached. Nomenclaturally unavailable names, including incorrect spellings are marked with #. Ranges of the species are cited as in codes. Original references to some taxa are given in blue colour.

In info-system of the Cesa, totally 602 recorded species of Lepidoptera from Macedonia are found. Taking this information into consideration, total number of the pterygots may increase to 1073.

The study is still continuing, and the new results will be published within this Project.

Synonymic and distributional list of the pterygot insects of Romania

(Results of the Entomofauna of the World based upon info-system of the Cesa)

74

Ahmet Ömer Koçak Muhabbet Kemal

Abstract: Synonymic and distributional list of the pterygot insects of Romania (*Results of the Entomofauna of the World, based upon info-system of the Cesa*) – 74. *Priamus* (suppl.) 18: 2622-2676.

In this study, totally 1334 species are listed. Synonymous names are arranged chronologically. Range of each species is given as codes. Together with the information on Lepidoptera of Romania recorded in info-system of the Cesa, total pterygot species of Romania increase to 4788.

Key words: List, distribution, *pterygota*, *Insecta*, Romania.

Brief explanatory information:

Previously published article	no
Previously published report	no
Expedition made by the Cesa	no
Planned expeditions	no
Further planned publications	yes

In this study, totally 1334 pterygot species are listed alphabetically. To each species, synonymous scientific names which are arranged chronologically, are attached. Nomenclaturally unavailable names, including incorrect spellings are marked with #. Ranges of the species are cited as in codes. Original references to some taxa are given in blue colour.

In info-system of the Cesa, totally 3454 recorded species of Lepidoptera from Romania are found. Taking this information into consideration, total number of the pterygots may increase to 4788.

The study is still continuing, and the new results will be published within this Project.

Synonymic and distributional list of the pterygot insects of Spain

(Results of the Entomofauna of the World based upon info-system of the Cesa)

Ahmet Ömer Koçak Muhabbet Kemal

Abstract: Synonymic and distributional list of the pterygot insects of Spain (*Results of the Entomofauna of the World, based upon info-system of the Cesa*) – 75. *Priamus* (suppl.) 18: 2677-2743.

In this study, totally 1590 species are listed. Synonymous names are arranged chronologically. Range of each species is given as codes. Together with the information on Lepidoptera of Spain recorded in info-system of the Cesa, total pterygot species of Spain increase to 6035.

Key words: List, distribution, *pterygota*, *Insecta*, Spain.

Brief explanatory information:

Previously published article	no
Previously published report	no
Expedition made by the Cesa	yes ¹³³
Planned expeditions	no
Further planned publications	yes

In this study, totally 1590 pterygot species are listed alphabetically. To each species, synonymous scientific names which are arranged chronologically, are attached. Nomenclaturally unavailable names, including incorrect spellings are marked with #. Ranges of the species are cited as in codes. Original references to some taxa are given in blue colour.

In info-system of the Cesa, totally 4445 recorded species of Lepidoptera from Myanmar are found. Taking this information into consideration, total number of the pterygots may increase to 6035.

The study is still continuing, and the new results will be published within this Project.

Synonymic and distributional list of the pterygot insects of Sweden

(Results of the Entomofauna of the World based upon info-system of the Cesa)

Ahmet Ömer Koçak Muhabbet Kemal

Abstract: Synonymic and distributional list of the pterygot insects of Sweden (*Results of the Entomofauna of the World, based upon info-system of the Cesa*) – 76. *Priamus* (suppl.) 18: 2744-2777.

In this study, totally 802 species are listed. Synonymous names are arranged chronologically. Range of each species is given as codes. Together with the information on Lepidoptera of Sweden recorded in info-system of the Cesa, total pterygot species of Sweden increase to 3517.

Key words: List, distribution, *pterygota*, *Insecta*, Sweden.

Brief explanatory information:

Previously published article	no
Previously published report	no
Expedition made by the Cesa	no
Planned expeditions	no
Further planned publications	yes

In this study, totally 802 pterygot species are listed alphabetically. To each species, synonymous scientific names which are arranged chronologically, are attached. Nomenclaturally unavailable names, including incorrect spellings are marked with #. Ranges of the species are cited as in codes. Original references to some taxa are given in blue colour.

In info-system of the Cesa, totally 2715 recorded species of Lepidoptera from Sweden are found. Taking this information into consideration, total number of the pterygots may increase to 3517.

The study is still continuing, and the new results will be published within this Project.

Abstract: Synonymic and distributional list of the pterygot insects of Ukraine (*Results of the Entomofauna of the World, based upon info-system of the Cesa*) – 77.
Priamus (suppl.) 18: 2778-2834.

In this study, totally 1420 species are listed. Synonymous names are arranged chronologically. Range of each species is given as codes. Together with the information on Lepidoptera of Ukraine recorded in info-system of the Cesa, total pterygot species of Ukraine increase to 4949.

Key words: List, distribution, *pterygota*, *Insecta*, Ukraine.

Brief explanatory information:

Previously published article	no
Previously published report	no
Expedition made by the Cesa	no
Planned expeditions	no
Further planned publications	yes

In this study, totally 1420 pterygot species are listed alphabetically. To each species, synonymous scientific names which are arranged chronologically, are attached. Nomenclaturally unavailable names, including incorrect spellings are marked with #. Ranges of the species are cited as in codes. Original references to some taxa are given in blue colour.

In info-system of the Cesa, totally 3529 recorded species of Lepidoptera from Ukraine are found. Taking this information into consideration, total number of the pterygots may increase to 4949.

The study is still continuing, and the new results will be published within this Project.

Synonymic and distributional list of the pterygot insects of Argentina

(Results of the Entomofauna of the World based upon info-system of the Cesa)

Abstract: Synonymic and distributional list of the pterygot insects of Argentina (*Results of the Entomofauna of the World, based upon info-system of the Cesa*) – 78.
Priamus (suppl.) 18: 2835-2837.

In this study, totally 67 species are listed. Synonymous names are arranged chronologically. Range of each species is given as codes. Together with the information on Lepidoptera of Argentina recorded in info-system of the Cesa, total pterygot species of Argentina increase to 271.

Key words: List, distribution, *pterygota*, *Insecta*, Argentina.

Brief explanatory information:

Previously published article	yes
Previously published report	no
Expedition made by the Cesa	no
Planned expeditions	no
Further planned publications	yes

In this study, totally 67 pterygot species are listed alphabetically. To each species, synonymous scientific names which are arranged chronologically, are attached. Nomenclaturally unavailable names, including incorrect spellings are marked with #. Ranges of the species are cited as in codes. Original references to some taxa are given in blue colour.

In info-system of the Cesa, totally 204 recorded species of Lepidoptera from Argentina are found. Taking this information into consideration, total number of the pterygots may increase to 271.

The study is still continuing, and the new results will be published within this Project.

Synonymic and distributional list of the pterygot insects of Brazil

(Results of the Entomofauna of the World based upon info-system of the Cesa)

Ahmet Ömer Koçak Muhabbet Kemal

Abstract: Synonymic and distributional list of the pterygot insects of Brazil (*Results of the Entomofauna of the World, based upon info-system of the Cesa*) – 79.

Priamus (suppl.) 18: 2838-2845.

In this study, totally 219 species are listed. Synonymous names are arranged chronologically. Range of each species is given as codes. Together with the information on Lepidoptera of Brazil recorded in info-system of the Cesa, total pterygot species of Brazil increase to 1424.

Key words: List, distribution, *pterygota*, *Insecta*, Brazil.

Brief explanatory information:

Previously published articles	yes
Previously published report	no
Expedition made by the Cesa	no
Planned expeditions	yes
Further planned publications	yes

In this study, totally 219 pterygot species are listed alphabetically. To each species, synonymous scientific names which are arranged chronologically, are attached. Nomenclaturally unavailable names, including incorrect spellings are marked with #. Ranges of the species are cited as in codes. Original references to some taxa are given in blue colour.

In info-system of the Cesa, totally 1205 recorded species of Lepidoptera from Brazil are found. Taking this information into consideration, total number of the pterygots may increase to 1424.

The study is still continuing, and the new results will be published within this Project.

Abstract: Synonymic and distributional list of the pterygot insects of Chile (*Results of the Entomofauna of the World, based upon info-system of the Cesa*) – **80**.

Priamus (suppl.) 18: 2846-2848.

In this study, totally 73 species are listed. Synonymous names are arranged chronologically. Range of each species is given as codes. Together with the information on Lepidoptera of Chile recorded in info-sytem of the Cesa, total pterygot species of Chile increase to 225.

Key words: List, distribution, *pterygota*, *Insecta*, Chile.

Brief explanatory information:

Previously published articles	yes
Previously published report	no
Expedition made by the Cesa	no
Planned expeditions	no
Further planned publications	yes

In this study, totally 73 pterygot species are listed alphabetically. To each species, synonymous scientific names which are arranged chronologically, are attached. Nomenclaturally unavailable names, including incorrect spellings are marked with #. Ranges of the species are cited as in codes. Original references to some taxa are given in blue colour.

Abstract: Synonymic and distributional list of the pterygot insects of Colombia (*Results of the Entomofauna of the World, based upon info-system of the Cesa*) – **81**.

Priamus (suppl.) 18: 2849-2852.

In this study, totally 73 species are listed. Synonymous names are arranged chronologically. Range of each species is given as codes. Together with the information on Lepidoptera of Colombia recorded in info-system of the Cesa, total pterygot species of Colombia increase to 741.

Key words: List, distribution, *pterygota*, *Insecta*, Colombia.

Brief explanatory information:

Previously published articles	yes
Previously published report	no
Expedition made by the Cesa	no
Planned expeditions	no
Further planned publications	yes

In this study, totally 73 pterygot species are listed alphabetically. To each species, synonymous scientific names which are arranged chronologically, are attached. Nomenclaturally unavailable names, including incorrect spellings are marked with #. Ranges of the species are cited as in codes. Original references to some taxa are given in blue colour.

In info-system of the Cesa, totally 668 recorded species of Lepidoptera from Colombia are found. Taking this information into consideration, total number of the pterygots may increase to 741.

The study is still continuing, and the new results will be published within this Project.

Abstract: Synonymic and distributional list of the pterygot insects of Costa Rica (*Results of the Entomofauna of the World, based upon info-system of the Cesa*) – **82**.

Priamus (suppl.) 18: 2853-2855.

In this study, totally 45 species are listed. Synonymous names are arranged chronologically. Range of each species is given as codes. Together with the information on Lepidoptera of Costa Rica recorded in info-system of the Cesa, total pterygot species of Costa Rica increase to 539.

Key words: List, distribution, *pterygota*, *Insecta*, Costa Rica.

Brief explanatory information:

Previously published articles	yes
Previously published report	no
Expedition made by the Cesa	no
Planned expeditions	no
Further planned publications	yes

In this study, totally 45 pterygot species are listed alphabetically. To each species, synonymous scientific names which are arranged chronologically, are attached. Nomenclaturally unavailable names, including incorrect spellings are marked with #. Ranges of the species are cited as in codes. Original references to some taxa are given in blue colour.

In info-system of the Cesa, totally 494 recorded species of Lepidoptera from Costa Rica are found. Taking this information into consideration, total number of the pterygots may increase to 539.

The study is still continuing, and the new results will be published within this Project.

Synonymic and distributional list of the pterygot insects of Peru

(Results of the Entomofauna of the World based upon info-system of the Cesa)

Ahmet Ömer Koçak Muhabbet Kemal

Abstract: Synonymic and distributional list of the pterygot insects of Peru (*Results of the Entomofauna of the World, based upon info-system of the Cesa*) – 84.

Priamus (suppl.) 18: 2863-2865.

In this study, totally 61 species are listed. Synonymous names are arranged chronologically. Range of each species is given as codes. Together with the information on Lepidoptera of Peru recorded in info-sytem of the Cesa, total pterygot species of Peru increase to 932.

Key words: List, distribution, *pterygota*, *Insecta*, Peru.

Brief explanatory information:

Previously published articles	yes
Previously published report	no
Expedition made by the Cesa	no
Planned expeditions	yes
Further planned publications	yes

In this study, totally 61 pterygot species are listed alphabetically. To each species, synonymous scientific names which are arranged chronologically, are attached. Nomenclaturally unavailable names, including incorrect spellings are marked with #. Ranges of the species are cited as in codes. Original references to some taxa are given in blue colour.

In info-system of the Cesa, totally 871 recorded species of Lepidoptera from Peru are found. Taking this information into consideration, total number of the pterygots may increase to 932.

The study is still continuing, and the new results will be published within this Project.

Synonymic and distributional list of the pterygot insects of Surinam

(Results of the Entomofauna of the World based upon info-system of the Cesa)

Abstract: Synonymic and distributional list of the pterygot insects of Surinam (*Results of the Entomofauna of the World, based upon info-system of the Cesa*) – **85**.
Priamus (suppl.) 18: 2866-2867.

In this study, totally 20 species are listed. Synonymous names are arranged chronologically. Range of each species is given as codes. Together with the information on Lepidoptera of Surinam recorded in info-system of the Cesa, total pterygot species of Surinam increase to 186.

Key words: List, distribution, *pterygota*, *Insecta*, Surinam.

Brief explanatory information:

Previously published article	no
Previously published report	no
Expedition made by the Cesa	no
Planned expeditions	no
Further planned publications	yes

In this study, totally 20 pterygot species are listed alphabetically. To each species, synonymous scientific names which are arranged chronologically, are attached. Nomenclaturally unavailable names, including incorrect spellings are marked with #. Ranges of the species are cited as in codes. Original references to some taxa are given in blue colour.

In info-system of the Cesa, totally 166 recorded species of Lepidoptera from Surinam are found. Taking this information into consideration, total number of the pterygots may increase to 186.

The study is still continuing, and the new results will be published within this Project.

Synonymic and distributional list of the pterygot insects of Venezuela

(Results of the Entomofauna of the World based upon info-system of the Cesa)

87

Ahmet Ömer Koçak Muhabbet Kemal

Abstract: Synonymic and distributional list of the pterygot insects of Venezuela (*Results of the Entomofauna of the World, based upon info-system of the Cesa*) – 87. *Priamus* (suppl.) 18: 2885-2887.

In this study, totally 63 species are listed. Synonymous names are arranged chronologically. Range of each species is given as codes. Together with the information on Lepidoptera of Venezuela recorded in info-system of the Cesa, total pterygot species of Venezuela increase to 570.

Key words: List, distribution, *pterygota*, *Insecta*, Venezuela.

Brief explanatory information:

Previously published articles	yes
Previously published report	no
Expedition made by the Cesa	no
Planned expeditions	yes
Further planned publications	yes

In this study, totally 63 pterygot species are listed alphabetically. To each species, synonymous scientific names which are arranged chronologically, are attached. Nomenclaturally unavailable names, including incorrect spellings are marked with #. Ranges of the species are cited as in codes. Original references to some taxa are given in blue colour.

In info-system of the Cesa, totally 507 recorded species of Lepidoptera from Venezuela are found. Taking this information into consideration, total number of the pterygots may increase to 570.

The study is still continuing, and the new results will be published within this Project.

Abstract: List of the valid name of the pterygot insects of Middle East (*Results of the Entomofauna of the World, based upon info-system of the Cesa*) – 88. *Priamus* (suppl.) 18: 2888-3186.

In this study, the species list of the pterygot orders is arranged in two parts. In the first part, the pterygot orders (except Lepidoptera) are evaluated. Totally 12999 species are listed together with the family names. Similarly, a list of the Lepidoptera, composed of 7390 species recorded in Middle East, is given in the second part. Consequently, pterygot species, listed here based upon the info-system of the Cesa, increase to 20389, representing 17 pterygot orders found in the seven Middle East countries (Turkey, Iran, Iraq, Syria, Lebanon, Jordan, and Israel).

Key words: List, distribution, *pterygota*, *Insecta*, Middle East, Turkey, Iran, Iraq, Syria, Lebanon, Jordan, Israel.

Within the frame of the Cesa Project Entomofauna, totally 20389 species of the 17 pterygot orders inhabiting in the seven Middle East countries (Turkey, Iran, Iraq, Syria, Lebanon, Jordan, and Israel). This list reflects certainly only a small part of the total fauna; however the result obtained cannot be over overlooked as it is the first and comprehensive study on this subject. In the near future, more detailed, complete and revised list will be published in our serials.

In this article, the species list of the pterygot orders is arranged in two parts. In the first part, the pterygot orders (except Lepidoptera) are evaluated. Among the total species, the Turkish insect list is represented by 86%. This rate will certainly be reasonable, whenever the Arabian and Persian insect lists are completed. The lepidopteran list is relatively more complete. The Lepidoptera of Turkey is represented by 71% in the whole Middle East fauna. Both lists comprise the alphabetically arranged valid specific names of the taxa, found in the Middle East region, with their family names. Synonyms and the subspecies are omitted here.
